

Link to Assessment Plan - outcome and measurement:

Examples:

This course will link to outcome #2, Students will demonstrate communication skills necessary for effective listening, reading, and writing. It will be measured through an essay question that is scored using a rubric.

This course replaced EDUC 210 and will support learning outcome #3: The ability to function within legal requirements. It will be measured through evaluation of laboratory exercises using item analysis, internship feedback from supervisors on a pre-determined form, and results of the part of the certification exam measuring ethics.

This is a new course providing a new focus to the program. This learning outcome will be added to our program assessment plan: Students will demonstrate the ability to analyze and repair circuits used in nanotechnology. It will be measured in a lab setting using an established list of criteria with a rating scale.
